

JavaScript Interview One-Liners (Complete Guide)

Core Concepts

- Object creation → `{}`, constructor, `Object.create`, class
- Prototype chain → inheritance via **proto** lookup
- `call`/`apply`/`bind` → control this context
- Closure → function remembers outer scope
- Hoisting → declarations moved to top
- TDZ → access before init error

Async & Event Loop

- Promise → async result holder
- States → pending → fulfilled/rejected
- Async/await → cleaner promise syntax
- Event loop → manages execution
- Call stack → execution context
- Microtask → Promise, `queueMicrotask`
- Macrotask → `setTimeout`, events

Functions

- HOF → takes/returns function
- Currying → `fn(a)(b)`
- Pure function → no side effects
- IIFE → runs immediately

Storage

- Cookie → server storage
- `localStorage` → persistent
- `sessionStorage` → session only

DOM & Events

- Bubbling → child → parent
- Capturing → parent → child
- Delegation → parent handles children

Arrays & Objects

- `map`/`filter`/`reduce` → transformations
- `slice` → non-mutating

- splice → mutating
- shallow vs deep copy → reference vs clone

⚡ Modern JS

- Arrow fn → lexical this
- Template literals → backticks
- Optional chaining → ?. safe access
- Nullish coalescing → ?? fallback

⚡ Advanced

- Debounce → delay execution
- Throttle → limit frequency
- Polyfill → add feature
- Shim → fix behavior

⚡ Node.js

- Single-threaded → event loop
- process.nextTick → highest priority
- setImmediate → after I/O
